DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on May 17, 2007 has been entered.

Action Summary

The rejection of claims 19-40 under 35 U.S.C. 112, first paragraph is being maintained for the reason stated in the previous Office Action.

The rejection of claims 1-5, 11-17, 19-23, 29-31 and 33-39 under 35 U.S.C. 103(a) as being unpatentable over Fructus et al. (WO 98/44904) in view of "Brooks Industries, inc. Cosmetic Ingredients & Ideas Protein Bonded Vitamins" (Brooks II), all of record is being maintained for the reasons stated in the previous Office Action.

The rejection of claims 6-10, 18, 24-28, 32 and 40 under 35 U.S.C. 103(a) as being unpatentable over Fructus et al. (WO 98/44904) in view of "Brooks Industries, inc. Cosmetic Ingredients & Ideas Protein Bonded Vitamins" (Brooks II) of record as

applied to claims 1, 3-5, 11-17, 19, 21-23, 29-31 and 37-39 and further in view of Saso et al. (1996), all of record is being maintained for the reasons stated in the previous Office Action.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 19-40 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The terms "a form of Vitamin A" "a form of Vitamin C", "a form of Vitamin E, "a form of Vitamin D" and "a form of Vitamin B3" set forth in claim 19 lack literal support in the specification as filed. This is a New Matter rejection.

Reminding claims are rejected to the extent that they depend from claim 19.

Claim Rejections - 35 USC § 103

Application/Control Number: 09/922,233

Art Unit: 1617

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-5, 11-17, 19-23, 29-31and 33-39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fructus et al. (WO 98/44904) in view of "Brooks Industries, inc. Cosmetic Ingredients & Ideas Protein Bonded Vitamins" (Brooks II), all of record.

Fructus et al. teach a dermatological and/or cosmetic composition for treating symptoms of skin ageing comprising a combination of at least one methylated silanol preferably, ascorbylmethylsilanol pectinate (Ascorbosilane C®, Exsymol). (abstract, page 7, lines 10-11, page 8, lines 7-8 and 10-12). Fructus et al. teach vitamin C derivative (tocopheryl acetate), vitamin A derivative (retinyl palmitate) and other components can be employed in the composition (page 12, lines 16-19, page 13, lines 1-7, Table 3, table 7).

Fructus et al. does not teach the employment of vitamins A (retinyl palmitate) and C (tocopheryl polypeptide) as protein bounded and cholecalciferol polypeptide and niacinamide polypeptide and the specific ratio amounts set forth in claim 2.

Brooks II teaches that the protein bonded vitamins of vitamin A and C (retinyl palmitate polypeptide and tocopherol polypeptide) are useful in cosmetic for the skin because they provide safe delivery system for cosmetic vitamins. (cover page under VITAZYMES Protein Bonded Vitamins, Description of products and table on second page). Brooks II teaches that niacinamide polypeptide and cholecalciferol

polypeptide are also available commercially and have advantages use in the skin care.

(VITAZYME D, VITAZYME B3, second page).

It would have been obvious to one of ordinary skill in the art to modify the composition of Fructus et al. and employ the peptide bonded (retinyl palmitate poly peptide and tocopheryl polypeptide) in place of tocopheryl acetate and retinal palmitate. One would have been motivated to make such a modification in order to achieve safe delivery system of vitamin A and E of the composition taught by Fructus et al. Further it would have been obvious to combine commercially well-known niacinamide polypeptide and cholecalciferol polypeptide in Fructus et al's composition. One would have been motivated to make such a modification in order to achieve at least an additive effect in provided skin care composition taught by Fructus et al. and Brook II. Applicant's newly add limitation of the terms "a form of Vitamin A" "a form of Vitamin C", "a form of Vitamin E, "a form of Vitamin D" and "a form of Vitamin B3" set forth in claim 19 is obvious because each of the active agents to be utilized are derived from the form of above vitamins and that these are inseparable characteristics.

Furthermore, no unobviousness is seen in the ratio claimed because once the usefulness of a compound is known to treat a condition, it is within the skill of the artisan to determine the optimum ratio.

Claims 6-10, 18, 24-28, 32 and 40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fructus et al. (WO 98/44904) in view of "Brooks Industries, inc.

Cosmetic Ingredients & Ideas Protein Bonded Vitamins" (Brooks II) of record as applied

Application/Control Number: 09/922,233

Art Unit: 1617

to claims 1, 3-5, 11-17, 19, 21-23, 29-31 and 37-39 and further in view of Saso et al. (1996), all of record.

The teaching of Fructus et al. and Brooks II as applied as before.

Fructus et al. and Brooks do not teach the glycolic acid and the amounts.

Saso et al. teach that alpha-hydroxy acids (e.g. glycolic acid) are anti-ageing compounds. (see title, abstract).

It would have been obvious to one of ordinary skill in the art to combine glycolic acid into Fructus et al's composition as modified by Brooks II. One would have been motivated to combine glycolic acid into Fructus et al.'s composition as modified by Brooks II et al. in order to achieve at least an additive effect in treatment of anti-aging of skin. The motivation for combining the components flows from their individually known common utility (see In re Kerkhoven, 205 USPQ 1069(CCPPA 1980)). It would be expected that the combination of components would treat anti-ageing of skin as well. The amounts of glycolic acid to be used is deemed obvious since they are all within the knowledge of the skilled pharmacologist and represent conventional formulations and modes of administration.

Thus, the claims fail to patentably distinguish over the state of the art as represented by the cited references.

None of the claims are allowed.

Response to Arguments

Applicant's arguments filed May 17, 2007 have been fully considered but they are not persuasive. With regard to the rejection under 35 U.S.C. 112, first paragraph (new matter rejection), Applicant argues that the other forms of vitamin A, vitamin C, etc is expressly set forth in the first paragraph of the Detailed Description section of the application (specification page 3, lines 3-5). This is not found persuasive because the disclosures in the instant specification page 3, lines 3-5 have been carefully reviewed and considered. However, the instant specification teaches utilization of the composition including Retinyl Palmitate Polypeptide, Ascorbylmethylsilanol Pectinate, Tocopheryl Polypeptide, Cholescalciferol Polypeptide, and or Niacinamide Polypeptide. (see page 3, lines 1-3). These particular compounds are utilized as active agents rather than a represented form of such Vitamin A, Vitamin C, etc. Therefore, instant Application utilized those specific active agents only, not as examples of broad genus of vitamin A, vitamin C, vitamin E, vitamin D or vitamin B3. Accordingly, one of ordinary skill in the art would not envision claimed specific agents are represented examples of broad genus of forms vitamins. Applicants argues that the use of the term "comprising" in the preamble allows the presence of other compounds in the composition other than the recited MDT-5. This is not found persuasive because the claim is drawn to limitation that is "comprising" followed by "consisting of" limitation that falls within the open limitation of "comprising" (in the same claim) is considered open language and does not exclude the presence of other forms vitamins in the composition. Applicant argue that the various secondary considerations are also relevant to an obviousness rejection and

Application/Control Number: 09/922,233

Art Unit: 1617

should be given weight in this matter and provided the number of issued patents returned by the database and that the table shows the queries used. This is not found persuasive because a large number of reference, or large number of quires do not determine the obviousness of the claimed invention. In this case, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). Accordingly, the claimed invention, as a whole, would have been prima facie obvious to one of ordinary skill in the art at the time the invention was made, because every element of the invention has been collectively taught by the combined teachings of the referenced. Thus, the claims fail to patentably distinguish over the state of the art as represented by the cited references.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jennifer Kim whose telephone number is 571-272-0628. The examiner can normally be reached on Monday through Friday 6:30 am to 3 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sreenivasan Padmanabhan can be reached on 571-272-0629. The fax phone number for the organization where this application or proceeding is assigned is

571-273-8300. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
